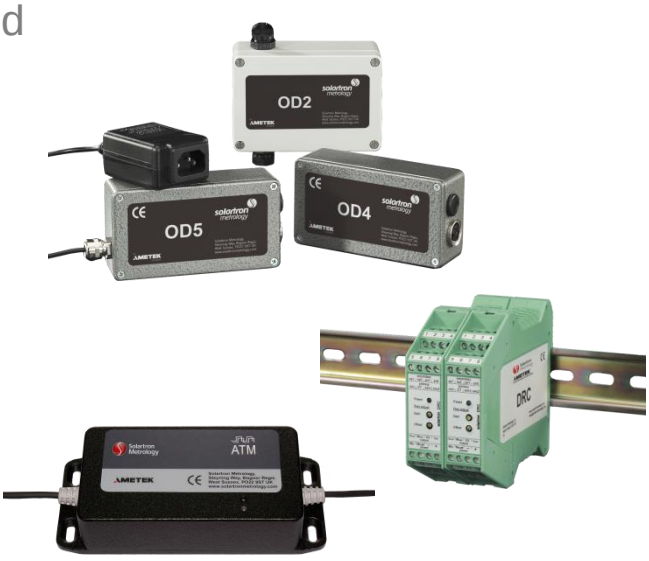
Transducer Signal Conditioning and Interface Modules



Features

- Accurate and repeatable
- LVDT and Half bridge Transducer Compatible
- Various Output Options
  - Voltage Outputs
  - Current Outputs (4-20mA)
  - TTL Outputs

Description

Solartron Metrology's range of conditioning electronics offers the user the ability to connect and configure LVDT and Half Bridge inductive sensors into an almost infinite number of combinations.

The range comprises the OD products which are housed in boxes in metal or plastic enclosures and can be easily mounted, the DRC conditioning module which s a DIN rail mount option, in line products such as the BICM and the ATM TTL convertor which provides differential square wave signals perfect for simple PLC interfaces.

Customised or special products will always be considered when there is not an exact fit in our standard product range.

For optimum performance in terms of transducers and electronics please consider Solartron Metrology's Orbit®3 Digital Measurement System which out performs the conventional analogue LVDT and Half Bridge sensors in all aspects.

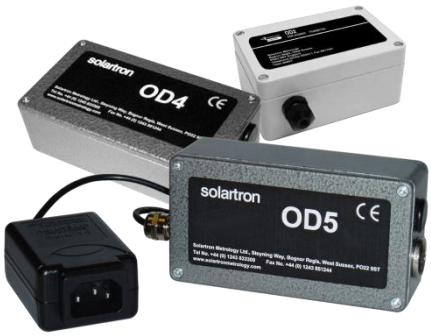
Transducer Signal Conditioning and Interface Modules

OD Series

The OD series of conditioning units is used to interface with Solartron's sensors to provide different functions to suit different applications.

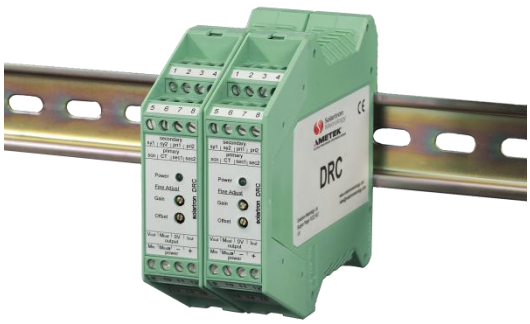
The OD2 is a two wire 4-20 mA signal conditioner. It is designed for signal transmission over long distances due to low noise susceptibility.

The OD4 (OD5 is a mains powered equivalent) is powered form a single 10 to 30V DC supply. The outputs are fully adjustable for offset and gain.



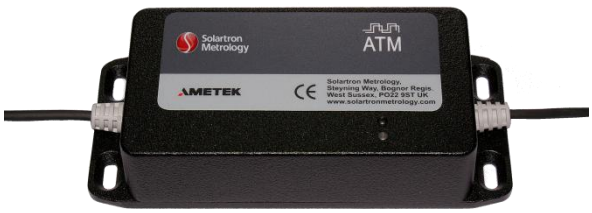
DRC

The DRC is a DIN rail mounted version of the OD4



ATM TTL Convertor

TTL RS422 is one of the most commonly used methods of communicating between Linear displacement sensors and Control or data Acquisition systems. Most sensors which offer this are incremental sensors and can loose position if moved to quickly. Solartron's ATM is an absolute system and can never loose position even if power is interrupted



BICM In Line Module

The BICM provides a simple low cost in line conditioning unit. This is ideal when the transducer set up is unlikely to require adjustment. The design is robust for harsh environments. An IP67 version is available
